OPERATOR GUIDE · PRODUCTION

From supplier to first sale

This guide shows you, step by step, how to buy materials, make the product, pack it, and sell it in Titan. Do the steps in order. Each step tells you where to click and what to type.

Step 4 is done only once for each product. After that, go straight from step 3 to step 5.

Money goes out at step 2. Money comes in at step 8.

Words you will see

Chemical

Raw liquid or powder we mix. Example: caustic soda.

Packaging

Bottles, caps, pouches, stickers and carton boxes.

Factory floor

The place in Titan where the factory keeps its stock. We mix, pack and sell from here.

Mixing formula

The recipe. Which chemicals, and how much of each.

Mixing batch

One time we mix. Each batch gets its own number.

Bulk

The mixed liquid in the tank, before it goes in bottles.

Pack

One bottle or pouch the customer buys.

Carton

A box that holds many packs. Example: 12 bottles.

Packing format

How one product is packed: pack size, which bottle, how many per carton.

Invoice

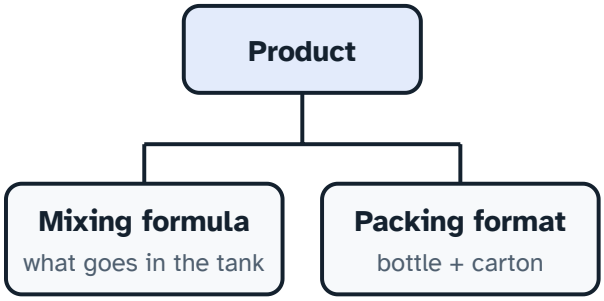

The sale bill we give to the customer.

0 Before you start

Usually done one time by the manager

Titan needs two things before you buy anything. Ask your manager to check these.

1. **A factory floor.**
   Go to **Inventory Management** › **Factory-Floor**. If you see "No Factory Floor Configured", click **Add Factory Floor**.
2. **The product.**
   Go to **Production** › **Packaging Formats**. Click **Manage products**, then **Add Product**. Type the name, example: "Dish Wash Liquid". Save.

One product. One recipe. One way to pack it.

How the pieces fit together. The formula and the packing format are made in step 4.

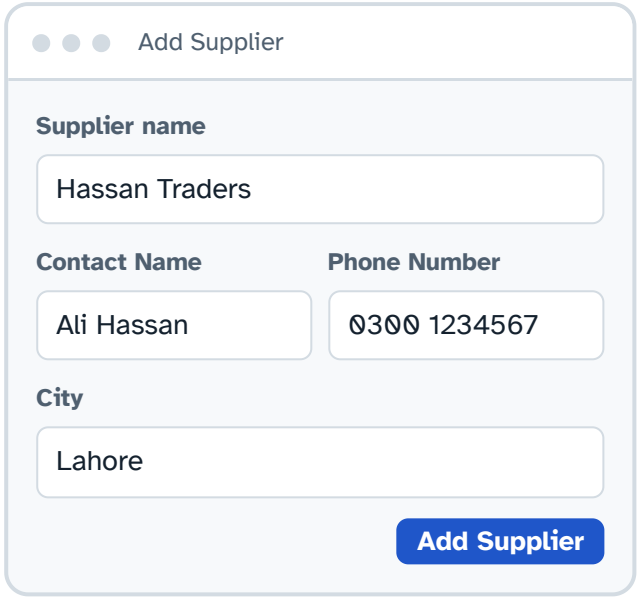

WHY WAIT? The formula needs the chemicals, and the packing format needs the bottles and cartons. Titan can only show them after you buy them in step 2. So we make the recipe in step 4.

1 Add the supplier

Do this once for each new supplier

Where: Suppliers

1. Click **Add Supplier**.
2. Type the shop name. Example: Hassan Traders.
3. Type the contact person and phone number.
4. Type the city and address.
5. Click **Add Supplier** at the bottom to save.

TIP Already in the list? Do not add the same supplier again. Use the search box first.

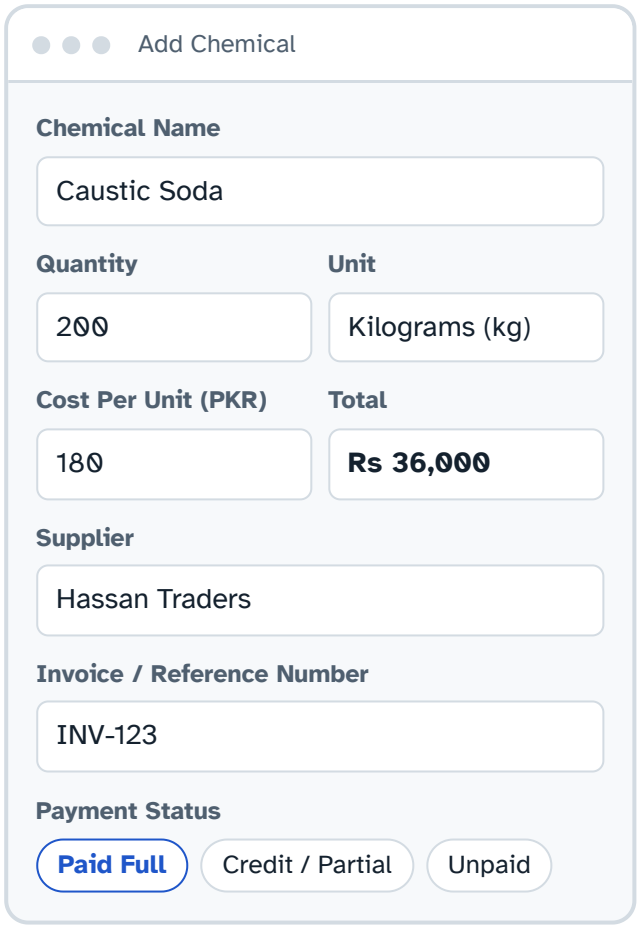

2 Buy the materials

Every time goods arrive from the supplier

Where: Inventory Management › Factory-Floor

Enter the bill exactly as the supplier gave it. Chemicals go in the **Chemicals** tab. Bottles, caps, stickers and cartons go in the **Packaging** tab.

1. Open the **Chemicals** tab.
2. New chemical? Click **Add Chemical**. Bought it before? Find it in the list and add stock on that row.
3. Type the name. Pick the unit: kg or litre.
4. Type the **Quantity** and the **Cost Per Unit (PKR)**. Titan works out the total.
5. Pick the **Supplier**.
6. Type the supplier's bill number in **Invoice / Reference Number**.
7. Pick how you paid (see below).
8. Click save.
9. Now do the same in the **Packaging** tab with **Add Packaging**. Bottles and cartons are counted in pieces.

How did you pay?

Paid Full
We paid the whole bill now. Pick the payment method too.

Credit / Partial
We paid some money. Type how much in "Amount Paid". The rest is owed.

Unpaid
We paid nothing yet. The full amount is owed to the supplier.

CAREFUL Check the quantity and price two times before you save. A wrong number here makes the cost of every bottle wrong later.

3 Make sure stock is on the factory floor

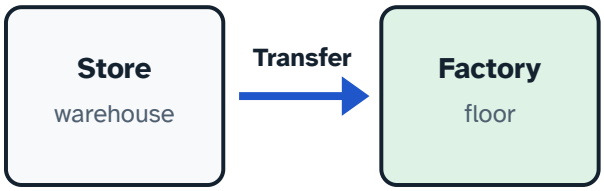

Quick check before mixing

Where: Inventory Management › Factory-Floor

Mixing and packing only use stock that is **on the factory floor**. Open the Chemicals tab and the Packaging tab and look at the numbers.

Did the goods go to another warehouse?
Move them:

1. Go to **Warehouses**.
2. Click **Transfer Stock** (on the item row).
3. **From Warehouse**: where it is now.
   To Warehouse: the factory floor.
4. Type the quantity and save.

Mix, pack and sell happen here →

Only the factory floor can be used for making and selling.

4 Write the recipe

Manager. Only once for each product. Skip this step if the recipe is already there.

Two things tell Titan how to make a product. The **mixing formula** says what goes in the tank. The **packing format** says how the liquid goes into bottles and cartons.

Part A — Make the mixing formula

Where: Production › Mixing Formulas

1. Click **Create Mixing Formula**.
2. **Mixing Formula Name**: give it a clear name. Example: Dishwash Base.
3. **Linked Product**: pick the product from step 0.
4. **Target Batch Size**: how much one normal batch makes. Example: 500.
5. **Bulk unit**: pick Liters or Kilograms.
6. Under **Ingredients**, click **Add Ingredient**. Pick a chemical and type how much goes in one batch.
7. Do this again for every chemical in the recipe.
8. You can write the mixing steps in **Production instructions**. Example: "Add water first, then LABSA, stir 20 minutes."
9. Click **Create Mixing Formula** to save.

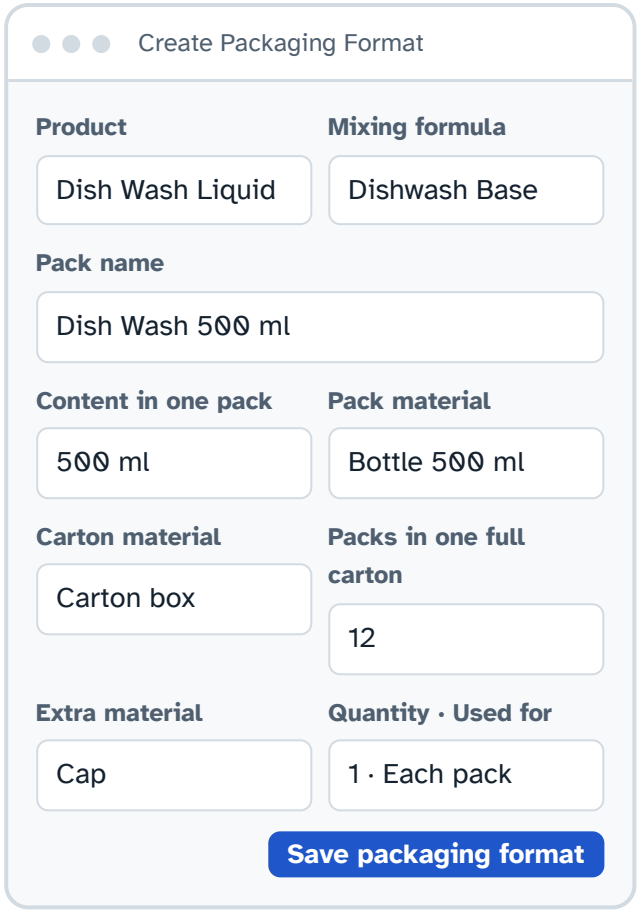

CAREFUL A chemical is missing from the "Select chemical" list? It has not been bought yet. Go back to step 2 and add it first.

Part B — Make the packing format

Where: Production › Packaging Formats

Make one packing format for each pack size. Example: one for 500 ml bottles and one for 1 litre bottles.

1. Click **New packaging format**.
2. **Product**: pick the product.
3. **Mixing formula**: pick the formula from Part A.
4. **Pack name**: what you call this pack. Example: Dish Wash 500 ml.
5. **Content in one pack**: how much liquid in one bottle. Example: 500, unit ml.
6. **Pack material**: pick the empty bottle or pouch.
7. **Carton setup**: pick the **Carton material** (the box) and type **Packs in one full carton**. Example: 12.
8. **Extra material**: add caps, stickers and other small items. Type the quantity and pick **Each pack** or **Each carton**.
9. Click **Save packaging format**.

The packing format tells Titan this picture. Then Titan knows how much liquid, bottles, caps and cartons each carton uses.

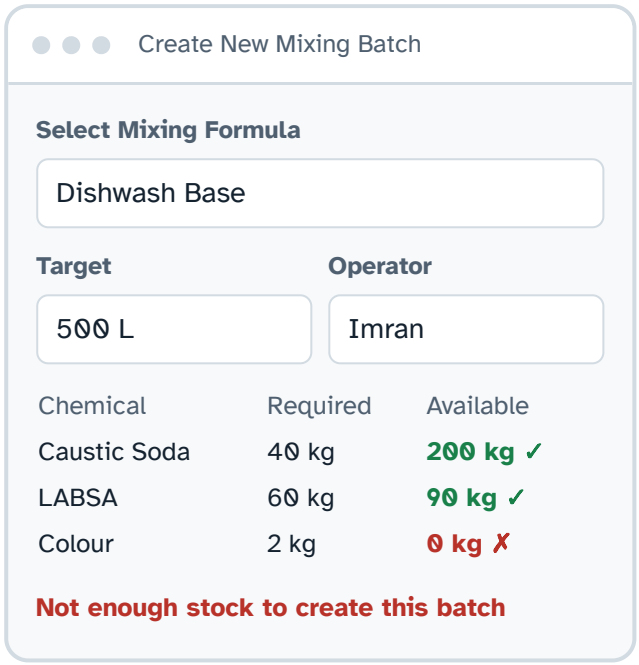

5 Mix the batch

Manager creates the batch, operator does the mixing

Part A — Manager: create and start the batch

Where: Production › Mixing Batches

1. Click **Create Mixing Batch**.
2. Pick the **mixing formula** you made in step 4.
3. Type how much to make (the target).
4. Pick the **Factory floor**.
5. Pick the **Operator** who will mix.
6. Titan shows each chemical: **Required**, **Available**, **Missing**. All must be green. Then save.
7. Open the new batch and click **Start Mixing Batch**.

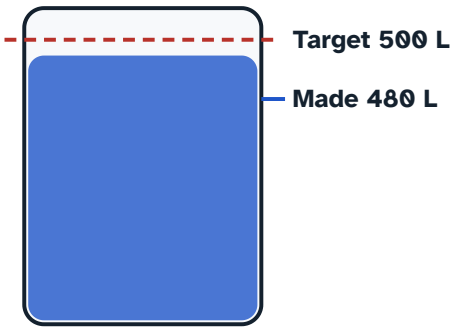

CAREFUL The chemicals leave the stock the moment you click **Start Mixing Batch**. Start only when the tank is really ready. If plans change before that, use **Cancel Mixing Batch**.

Part B — Operator: do the mixing

Where: Production Workstation

1. Find your batch in the list. You can search by batch number.
2. Open it. You will see two big boxes: **Target Bulk** (blue) and **Actual Yield** (green).
3. After mixing, measure the liquid in the tank.
4. Type that amount and click **Record Bulk Output**.
5. When the batch is fully done, click **Mark Batch as Completed**.

Type what is really in the tank

Made less than the target? That is OK. Write the reason in the box, then complete.

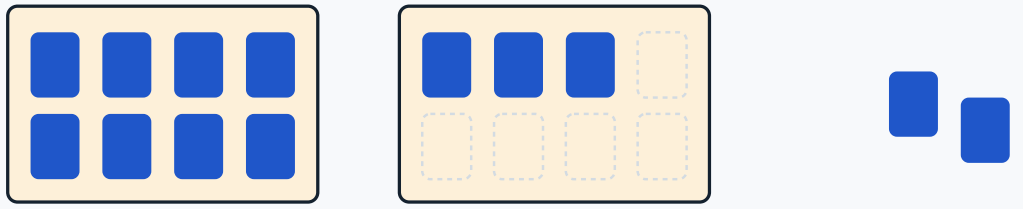

TIP If the batch went bad and nothing came out, type the reason and click **Mark zero-output batch failed**. This button only shows when no output was recorded.

6 Pack the batch

Operator, right after mixing is completed

Where: Production Workstation › open the completed batch

When a batch is completed, the packing screen opens. First fill the bottles and put them in cartons. Then count and type three numbers.

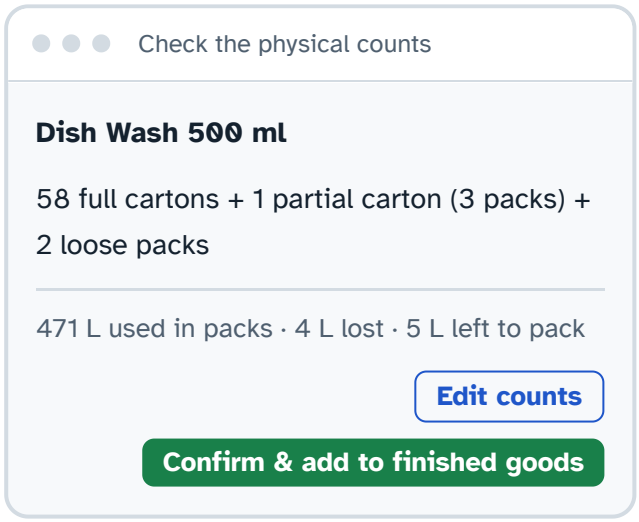

Full carton
box is completely full

Partial carton
a box, not full (type packs)

Loose packs
no box at all

In this picture one carton holds 8 packs. Your carton size comes from the packing format.

1. Pick the packing format (example: Dish Wash 500 ml). Not in the list? Make it first: step 4, Part B.
2. Type the number of **full cartons**.
3. If one box is not full, type how many packs are in it (**partial carton**).
4. Type the **loose packs** (bottles not in any box).
5. Look at **Weight check**: it shows how much liquid was used, lost, and left.
6. Click **Review packing**.
7. Count the real boxes on the floor one more time. Do they match the screen?
8. Yes? Click **Confirm & add to finished goods**.
   No? Click **Edit counts** and fix.

CAREFUL Nothing changes in stock until you click Confirm. After you confirm, the bottles, caps and cartons you used leave the stock, and the finished cartons are added to the factory floor, ready to sell.

7 Quality check

QC person or manager

Where: Production › Production QC

1. Find the batch.
2. Click **Create quality report**.
3. Fill in the test results from the lab.
4. Click **Save quality report**.

WHY The report proves the batch was tested. If a customer complains later, we can look up the batch number and see the results.

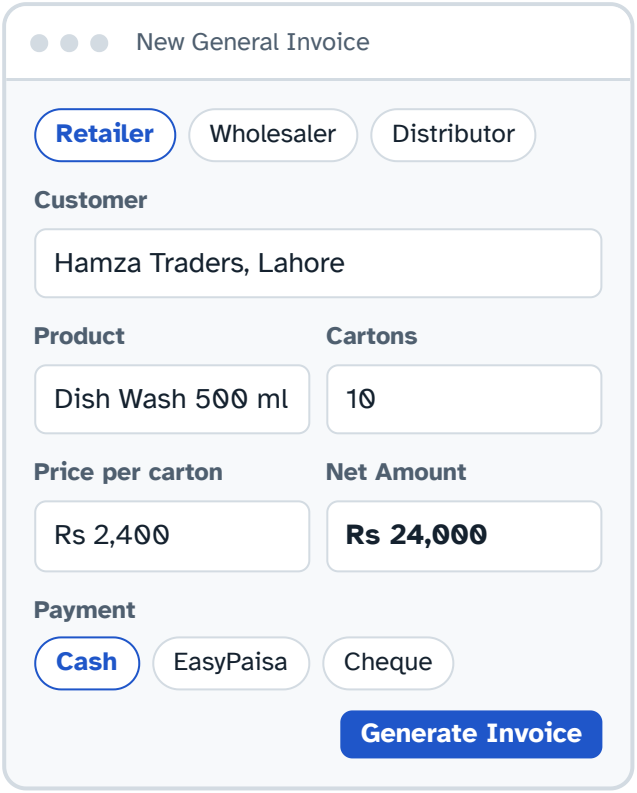

CAREFUL Cartons that are put "on hold" for quality problems cannot be sold until the hold is removed.

8 Make the first sale

Sales person or operator with sales access

Where: Sales › New Invoice

1. Shop or wholesaler? Click **New General Invoice**.
   Distributor? Click **New Distributor Invoice**.
2. Pick the **customer** (or add a new one with name, phone, city).
3. Pick the **Product**. Titan shows how many cartons are in stock.
4. Type the **number of cartons** and loose units.
5. Check the **price per carton**.
6. Add the payment: Cash, bank, EasyPaisa, JazzCash, cheque, or "No payment received now".
7. Check the total at the bottom.
8. Click **Generate Invoice**. Print it and give it to the customer.

DONE The sold cartons leave the factory floor stock by themselves. You do not need to remove them by hand. Your first sale is complete.

If something goes wrong

WHAT YOU SEE	WHAT TO DO
"Not enough stock to create this batch"	Look at the red **Missing** line. Buy that chemical (step 2) or move it to the factory floor (step 3).
"No Factory Floor Configured"	Ask the manager to add a factory floor (step 0).
My formula is not in the "Select Mixing Formula" list	The formula is not made yet, or it is turned off. Make it in step 4, or ask the manager to make it active.
A chemical or bottle is not in the list when making the recipe	It was not bought yet. Add it in step 2 first.
My batch is not in the Workstation list	The batch may be given to another operator, or it was not started yet. Ask the manager.
The Complete button is grey	Record some output first. If you made less than the target, write the reason in the box.
Packing says "Over available"	You typed more packs than the liquid can fill. Count the cartons again and fix the numbers.
Product does not show stock on the invoice	The batch was not packed and confirmed yet (step 6), or the cartons are on hold.
I typed a wrong number and already saved	Do not try to fix it with a second entry. Tell the manager. They can correct it.

My checklist

Tick each step as you finish it. Your ticks stay on this device only.

- [ ] Supplier is added
- [ ] Chemicals bought and saved
- [ ] Bottles, caps and cartons bought and saved
- [ ] All stock is on the factory floor
- [ ] Mixing formula and packing format are ready
- [ ] Mixing batch created and started
- [ ] Bulk output recorded and batch completed
- [ ] Cartons counted and packing confirmed
- [ ] Quality report saved
- [ ] First invoice generated and printed

Golden rule: what you type must match what is really on the factory floor.
